

## Strategy

### Impact on Taiex & sectors of US presidential election

#### Key message

1. Trump's plan for higher tariffs the main risk.
2. Taiwan's export-oriented green energy sector to be impacted under Trump victory.
3. Taiex backend-loaded – To peak at 23,000 points and trough at 20,000 points in 2H24F.

#### Market concerned about risk of a Trump victory after the presidential debate

Former President Donald Trump has inched ahead of President Biden in the first national poll since the incumbent's widely-considered “disastrous” CNN debate on June 28. Trump will return to the White House if the results of national polling hold up. Due to the electoral system in the US, swing states are critical to candidates. Trump has led Biden in swing states before and since the debate. Since Trump has made it clear that he will impose another round of new import tariffs, namely a 10% across-the-board levy on all products imported into the US, and calls for a 60% tariff on all Chinese goods if elected, countries around the world are concerned about damage to the global economic system. In addition to a possible global tariff war, the global green energy sector may be impacted heavily as Trump is not a believer in climate change, though this would benefit traditional energy industries as environmental regulations may be lifted. More generally, Trump and Biden hold radically different views on many issues, including abortion, immigration, business and personal income taxes (including the wealth tax) and the Russia-Ukraine conflict. However, we think the overall impact of a Trump victory will be greater in the US than in Taiwan, which will only be moderately affected.

#### Trump's higher import tariffs the main risk for Taiwan

During Trump's 2016-20 term, his administration imposed a round of tariffs that targeted US\$250bn of China-made goods. As a result, many Taiwanese manufacturers operating in China moved production lines to Southeast Asia and/ or back to Taiwan, not only reducing the negative impact but actually benefiting from order transfers. However, this time around Trump is floating a 10% across-the-board tariff on all US imports, which means the impact on the profitability of Taiex-listed companies will be significant. Based on annual exports of approximately US\$100bn to the US, if all of Taiwan's goods exported to the US are fully levied with a 10% tariff, Taiwanese exporters will have to pay an additional US\$10bn in tariff fees (NT\$320bn). This equates to as much as 8.2% of total Taiex profitability, leaving 2025F forward profitability at around NT\$3.9tn. Overall risk will be unpredictable as Taiwanese firms pass on the additional tariffs to US companies, which in turn pass on to US consumers, resulting in price hikes and a consumption slowdown. Meanwhile, Trump's proposed levy of 60% or more on Chinese imports will put 'de-Sinicization' efforts back in the spotlight. Since Trump initiated tariff wars against China in 2018 and Biden a technology war in 2022, China's market share in overall US import value has dropped from 18% to 11.6% (in 2023), while its import ranking has dropped from first place to third, now trailing Mexico (first place) and Canada (second place).

The presidential election is scheduled for November 5. If pre-election polls or swing state support rates veer towards Trump, we believe the impact on the stock market will be gradually priced in during 2H24F. Therefore, the Taiex may be prone to volatility two to three months prior to the election. We see three potential scenarios post-election. Scenario 1 is a Trump victory. The Taiex will slump as Trump pledges to implement his tariff policy, affecting global trade. Scenario 2 is a Trump loss, though Trump does not admit defeat. The Taiex will plunge due to concerns about political turmoil and civil strife in the US. And Scenario 3 is a Biden win of a second term. The Taiex will rally as Biden continues existing trade and military policies.

**Trump victory will hurt US green energy sector & Taiwan's related exports**

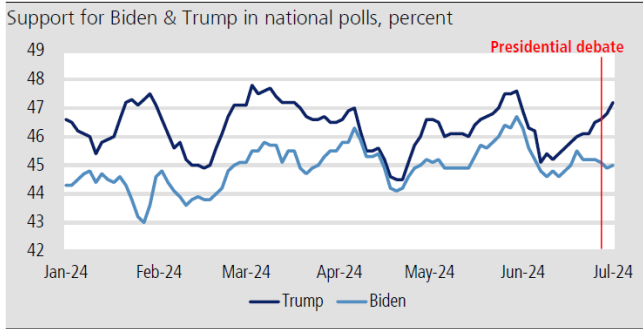

Trump is disdainful of climate change theory and believes strong moves in the direction of renewable energy mean the US will give up its advantages in abundant natural resources for exploitation, benefiting traditional energy industries and allowing China and Europe, which have stronger clean energy industries, to profit. Therefore, a Trump return could mean a cancellation of federal subsidies for renewable energy, reduced investment in clean energy technology and infrastructure, and a shift back toward traditional energies. These policies will weigh on the profitability of global solar and electric vehicle sectors, and reduce the market competitiveness of these industries. Companies may face challenges such as capital shortages and lower market demand and investment. For the traditional energy industry, under relaxed regulations, firms could cut operating costs, further stimulating the production and export of US oil and liquefied natural gas. For Taiwan's green energy industry, except for a few solar module manufacturers and automobile components exported to the US, most green energy companies are domestic-oriented. In addition, demand for green energy will continue to expand in Taiwan due to AI industry-driven electricity demand. Thus, negative impacts will be limited.

**Valuation & Action**

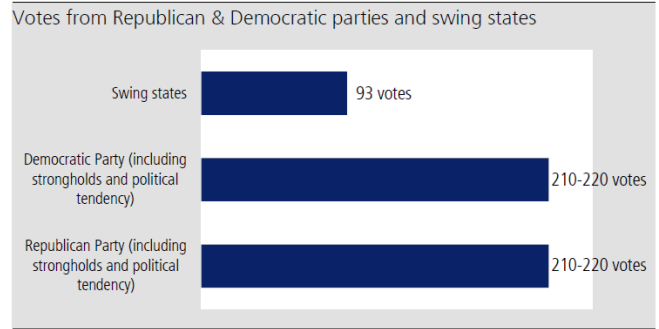

If pre-election polls or support rates in swing states lean towards Trump, the market will be most concerned about the risk of comprehensive tariff hikes under Trump. As a result, the Taiex may be in consolidation mode in 2H24F, especially in the two to three months before the election. If he wins, Trump may reduce or cancel subsidies for the green energy industry, impacting Taiwan's export-oriented green energy companies. In addition, early pull-in (to avoid high tariffs) may be seen, leading to urgent orders for shipping and air freight. Hence, we recommend investors keep an eye on freight rate changes at election time. Since there is still some time until the election, we maintain our Taiwan investment preferences for 3Q-4Q24F. Namely, for 3Q24, stocks in industries that are bottoming, stocks with low valuations and high dividends, and stocks with government policy support. For 4Q24, we recommend focusing on the AI supply chain.

We maintain our estimate the Taiex will peak at 23,000 points (20x 2024-25F average EPS) and trough at 20,000 points (18x 2024-25F average EPS) in 2H24F. The average PE of the Taiex over the past five years is 15x.

**Figure 1: Support for Trump has edged above Biden since the presidential debate**

**Figure 2: Votes from swing states critical to election result**

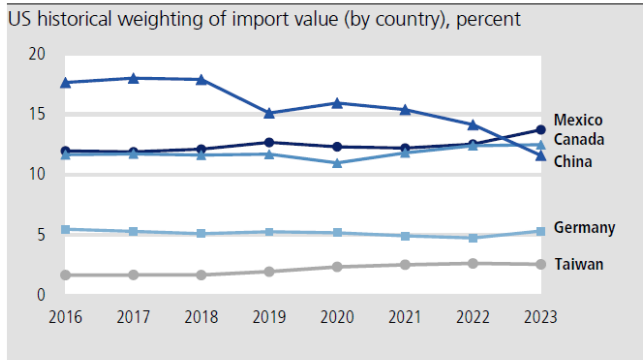

**Figure 3: Political views - Trump vs. Biden**

|                     | Trump  | Biden  |
|---------------------|--|--|
| Global trade        | Imposing a 10% across-the-board levies on all products imported from overseas and a 60% tariff on all Chinese goods and products | Launch tariff and technology wars against China          |
| Green energy        | Green energy sector to be affected; traditional energy industries to benefit from relaxed regulations                            | Aggressively supporting clean energy projects            |
| Tax                 | Cutting taxes for businesses and top earners   | Raise taxes on corporations and the wealthy.             |
| Abortion            | Abortion rights should be left to the states   | A doctor should be making the decisions                  |
| Immigration         | "Zero tolerance" policy toward illegal border crossing   | Taking a more 'humane' approach to US immigration policy |
| Russo-Ukrainian War | Disagrees to give financial support, confident to settle the war   | Continue to send Ukraine fresh military aid              |
